

HCAL/JET/MET REORGANIZATION

Simulation: Sunanda Banerjee (with strong Tata participation)

Calibrations: Olga Kodolova (with strong Russian participation)

HCAL in ORCA: Salavat Abdullin

Physics Objects with HCAL: Sasha Nikitenko

Test Beam: ???

Production Problems

mail from Stickland indicates a clear need for more ability to do ORCA productions in U.S.

maybe our current requests will not be ORCA-ized without this.

need to ask FNAL software engineers

- 1) how soon can they get their system going?

- 2) if there are other institutions with LINUX, how hard/would it help to try to get them going?

a serious problem that I think will get worse. In these development times, we often need to reprocess our samples. I don't foresee this changing soon. can not be done at CERN. Need to mobilize U.S. computing resources now.
